TABLE OF CONTENTS

1.0 EXECUTIVE SUMMARY

1.1 Design Conditions ........................................................................................................... 1-1
   1.1.1 Demographics
   1.1.2 Wastewater Flows

1.2 Collection System Evaluation & Recommendations ....................................................... 1-2
   1.2.1 Lift Station Evaluation
   1.2.2 Pipeline Condition and Capacity Evaluation
   1.2.3 System Maintenance Evaluation
   1.2.4 Recommended Collection System Improvements

1.3 Effluent Disposal ............................................................................................................. 1-4
   1.3.1 Effluent Disposal Options
   1.3.2 Effluent Disposal Recommendation

1.4 Wastewater Treatment .................................................................................................... 1-5
   1.4.1 Existing Facilities
   1.4.2 Recommended Improvements
   1.4.3 Treatment Alternatives
   1.4.4 Biosolids Handling Alternatives
   1.4.5 WWTP Improvement Recommendations

1.5 Capital Improvements Plan & Financing ......................................................................... 1-8
   1.5.1 Summary of Costs
   1.5.2 Other Annual Costs
   1.5.3 Financing / Rates

2.0 REGULATORY REQUIREMENTS

2.1 Collection System Regulations ....................................................................................... 2-1
   2.1.1 Pump Station Design Regulatory Requirements
   2.1.2 Pipeline Regulatory Rules

2.2 Treatment Plant Regulations .......................................................................................... 2-3
   2.2.1 NPDES Permit Requirements
   2.2.2 TMDL Requirements
   2.2.3 Anticipated Additional Future Permit Requirements
   2.2.4 Plant Reliability Criteria
   2.2.5 Oregon’s Regulations for Biosolids Management
   2.2.6 GASB-34 Requirements
   2.2.7 Greenhouse Gas Policies

2.3 Recycled Water (Reuse) Regulations .............................................................................. 2-11

2.4 City Policies & Guidelines ............................................................................................ 2-11
   2.4.1 Phosphate Ban
   2.4.2 Pretreatment Ordinance
   2.4.3 Other Policies and Procedures
3.0 COLLECTION SYSTEM CONDITIONS

3.1 Wastewater Collection System Overview ..........................................................3-1
3.2 Lift Station Evaluation .......................................................................................3-1
   3.2.1 Creek Drive Lift Station
   3.2.2 Grandview Lift Station
   3.2.3 Nevada Street Lift Station
   3.2.4 North Main Lift Station
   3.2.5 North Mountain Lift Station
   3.2.6 Shamrock Lift Station
   3.2.7 Winburn Lift Station
   3.2.8 Ashland Creek Lift Station
   3.2.9 Lift Station Design Standards
   3.2.10 Lift Station SCADA
   3.2.11 Summary of Lift Station Recommendations
3.3 Collection System Pipeline Conditions ...............................................................3-7
3.4 Collection System Maintenance .......................................................................3-8
   3.4.1 Maintenance Goals
   3.4.2 CCTV Log Evaluation
   3.4.3 Maintenance Management System
3.5 Divisions .............................................................................................................3-11
3.6 Recommendations ............................................................................................3-12

4.0 WASTEWATER DESIGN CONDITIONS

4.1 Area Demographics .........................................................................................4-1
4.2 Study Area & Land Use ...................................................................................4-2
4.3 Wastewater Treatment Plant Flow Data ..........................................................4-2
   4.3.1 Historical Trends
   4.3.2 Average Day and Peak Day Flow Rates
   4.3.3 Seasonal Variations in Flow Rates
   4.3.4 Peak Hourly Flow Rates
   4.3.5 Per Capita Flow Data
4.4 Infiltration & Inflow ..........................................................................................4-6
4.5 Design Flows .....................................................................................................4-9
   4.5.1 Existing Flows
   4.5.2 Projected Flow from Future Growth
4.6 Future Flow Rates ............................................................................................4-10

5.0 COLLECTION SYSTEM MODEL DEVELOPMENT & EXISTING SYSTEM EVALUATION

5.1 Model Selection ...............................................................................................5-1
5.2 Model Update ..................................................................................................5-1
5.3 Model Calibration ............................................................................................5-1
   5.3.1 Flow Monitoring
   5.3.2 Dry Weather Calibration
   5.3.3 Wet Weather Calibration
5.4 Existing System Deficiencies ........................................................................5-3
5.5 Pipeline Conditions .........................................................................................5-4
6.0 EVALUATE FUTURE COLLECTION SYSTEM PERFORMANCE

6.1 Future Flow Rate Projections & Model Scenarios ...................................................... 6-1
6.2 Future Deficiencies .................................................................................................. 6-2

7.0 COLLECTION SYSTEM IMPROVEMENT ALTERNATIVES

7.1 Improvement Alternatives ...................................................................................... 7-1
  7.1.1 Priority 1 Alternatives – Address Existing Deficiencies
  7.1.2 Priority 2 Alternatives – Address Future Deficiencies

8.0 COLLECTION SYSTEM IMPROVEMENT PLAN

8.1 Recommended Capital Improvements .................................................................. 8-1
  8.1.1 Priority 1 – Address Existing Deficiencies
  8.1.2 Priority 2 – Address Future Deficiencies
  8.1.3 Future Pipelines and Lift Stations

8.2 Operational & Maintenance Improvements .......................................................... 8-3
  8.2.1 Infiltration and Inflow Reduction Program
  8.2.2 Collection System Staffing

8.3 Environmental Considerations .............................................................................. 8-5

9.0 WASTEWATER TREATMENT PLANT - EXISTING CONDITIONS & CAPACITY
   EVALUATIONS

9.1 Process Description ............................................................................................... 9-1
9.2 NPDES Permit Compliance ................................................................................... 9-2
  9.2.1 CBOD₅
  9.2.2 TSS
  9.2.3 Ammonia
  9.2.4 Phosphorus
  9.2.5 E. coli
  9.2.6 Excess Thermal Load
  9.2.7 Dissolved Oxygen
  9.2.8 Summary of NPDES Permit Limits Compliance

9.3 Plant Capacity ......................................................................................................... 9-7
  9.3.1 Influent Pumping – Ashland Creek Lift Station
  9.3.2 Headworks
  9.3.3 Biological Process
  9.3.4 UV Disinfection
  9.3.5 Membrane Filtration
  9.3.6 Outfall
  9.3.7 Solids Handling
  9.3.8 Electrical and SCADA

9.4 Evaluation of Operations ...................................................................................... 9-34
  9.4.1 Staffing
  9.4.2 Operational Theory
  9.4.3 Testing Practices
  9.4.4 Safety

9.5 Carbon Footprint .................................................................................................... 9-38
9.6 Summary of Existing Plant & Deficiencies ............................................................ 9-38
10.0 EFFLUENT DISPOSAL ALTERNATIVES

10.1 Background........................................................................................................10-1
10.2 Reuse Options ..................................................................................................10-1
   10.2.1 Option 1: Recycling Water on Imperatrice Ranch Property
   10.2.2 Option 2: City-Wide Recycling
10.3 Relocated Discharge Options...........................................................................10-4
   10.3.1 Option 3: Discharge to Talent Irrigation District (TID)
10.4 Options for Continued Discharge to Ashland/Bear Creek .........................10-5
   10.4.1 Option 4: Cooling Tower / Heat Exchanger / Chiller
   10.4.2 Option 5: Trading (Shading)
   10.4.3 Option 6: Blending / Flow Augmentation
   10.4.4 Option 7: Hyporheic (Shallow Groundwater Mixing)
10.5 Summary and Recommendations....................................................................10-17

11.0 TREATMENT PLANT IMPROVEMENT ALTERNATIVES

11.1 Introduction ......................................................................................................11-1
11.2 Using Agricultural Recycling & Controlled Discharge to Optimize .........11-1
11.3 Treatment Alternatives for Year-Round Discharge ...................................11-1
   11.3.1 No Action Alternative
   11.3.2 Reduction of Peak Flows
   11.3.3 Expansion of Existing Oxidation Ditch Plant
   11.3.4 Parallel Membrane Plant
   11.3.5 Process Modifications in Existing Tankage
   11.3.6 Summary of Pre-Screening
   11.3.7 Temporary Primary Filter Option
   11.3.8 Annualized Cost Comparison of Selected Liquid Treatment Alternatives
11.4 Biosolids Handling Alternatives .....................................................................11-8
   11.4.1 Biosolids Disposal Options
   11.4.2 Biosolids Process Alternatives
   11.4.3 Summary of Pre-Screening of Biosolids Options
   11.4.4 Annualized Cost Comparison of Selected Biosolids Handling Alternatives

12.0 RECOMMENDED TREATMENT PLANT IMPROVEMENTS

12.1 Objectives ........................................................................................................12-1
   12.1.1 Eliminate NPDES Permit Violations
   12.1.2 Prevent Plant Deficiencies
   12.1.3 Stay Ahead of Growth and Maintain Equipment
   12.1.4 Improve Solids Handling
   12.1.5 Improve SCADA System
12.2 Selected Treatment Improvements ..................................................................12-3
   12.2.1 Description
   12.2.2 Land Availability
   12.2.3 Environmental Impacts
   12.2.4 Operation Theory
   12.2.5 Staffing
12.3 Summary & Recommendations ................................. 12-5
  12.3.1 Construction Phasing Plan
  12.3.2 Cost Estimates

13.0 CAPITAL IMPROVEMENT PLAN
  13.1 Basis for Estimate of Probable Cost .......................... 13-1
    13.1.1 Construction Costs
    13.1.2 Contingencies
    13.1.3 Engineering Costs
    13.1.4 Administrative Costs
  13.2 Summary of Costs ............................................. 13-1
  13.3 Other Annual Costs ............................................. 13-3

14.0 FINANCIAL PLAN
  14.1 Financial Forecast ............................................. 14-1
    14.1.1 Cash Flows from Operating Activities
    14.1.2 Cash Flows from Capital & Related Activities
    14.1.3 Cash Flows from Investing Activities
    14.1.4 Cash & Equivalents
  14.2 Summary ....................................................... 14-5
  14.3 Other Financing Options ....................................... 14-6
    14.3.1 Oregon Department of Environmental Quality, State Revolving Fund (DEQ SRF)
    14.3.2 Oregon Infrastructure Finance Authority (IFA)
    14.3.3 U.S. Economic Development Administration (EDA)
    14.3.4 Bonneville Power Association, Energy Smart Industrial Program (BPA ESI)
  14.4 Recommendations .............................................. 14-8

CHARTS
  Chart 2.1 Regulation Subparts Applicable to Ashland WWTP
  Chart 2.2 Class A Pathogen Reduction Requirements
  Chart 2.3 Vector Attraction Reduction Options
  Chart 4.1 Historical Population Trends and Projections (1971 - 2060)
  Chart 4.3 Monthly WWTP Influent and Precipitation for 2005 - 2009
  Chart 4.4 Daily WWTP Influent and Precipitation, Oct 2005 - Apr 2006
  Chart 4.5 Daily WWTP Influent and Precipitation, May 2006 - Apr 2007
  Chart 4.6 Categorized Sewer Flows (2008 - 2010)
  Chart 5.1 Sample Dry Calibration Site 8 Modeled vs. Observed Flows (MH 09AC-040)
  Chart 5.2 Sample Dry Calibration Site 7 Modeled vs. Observed Flows (MH 10BC-039)

APPENDICES

APPENDIX A – FIGURES
- Figure 3.1: Existing Collection System
- Figure 3.2: Sewer Basins
- Figure 5.1: Existing System Capacity
- Figure 6.1: Study Area
- Figure 8.1: Master Plan
- Figure 12.1: Future WWTP Expansion

APPENDIX B – EXISTING SYSTEM DATA
- NPDES Permit
- Lift Station Data
- Pipeline Condition Evaluation
APPENDIX C – FLOW DATA
- WWTP Influent & Precipitation Data
- Water Usage Analysis
- Design Flows Method
- Summary of Flow Monitoring Data

APPENDIX D – MODEL CONSTRUCTION & SCENARIO RESULTS
- Dry Calibration Data
- Existing & Future Capacity Analysis (Model Results)

APPENDIX E – TREATMENT EVALUATION SUPPORT DATA
- Membrane Replacement Technical Memorandum
- Staffing Analysis
- Recycle/Reuse Analysis
- Hyporheic Evaluation
- Carbon Footprint Evaluation

APPENDIX F – COST ESTIMATES
- Collection System Costs
- Treatment System Costs
  - WWTP Improvements
  - Shading/Outfall Relocation
  - Treatment Alternatives
- Short-Lived Assets
- 6-Year Capital Improvements Plan
- Rogue Valley Sewer Disposal Option

APPENDIX G – FINANCIAL ANALYSIS
