To the City Council

RE: Normal Neighborhood Plan

I support the Planning Commission recommendation concerning the timing of transportation improvements related with the future development of the plan area. In order to address current and future transportation along East Main Street and the public rail road crossing at Normal.

I agree the south side of E Main Street, from Walker Ave to Clay should be fully improved to City Street Standards prior to development within the plan area. And the public rail road crossing be installed and a financing plan be developed prior to annexation and development within the plan area.

Addressing these two transportation matters before development and annexation will be vital to support the additional traffic the development will bring to the area.

Thank you,  
Susan Wallace
